

PNAS Information for Authors

REVISED July 2013

PURPOSE AND SCOPE

The *Proceedings of the National Academy of Sciences USA* (PNAS) publishes research reports, commentaries, perspectives, and colloquium papers. In accordance with the guiding principles established by George Ellery Hale in 1914, PNAS publishes brief first announcements of Academy members' and foreign associates' (hereafter referred to as members) more important contributions to research and of work that appears to a member to be of particular importance. PNAS is a general science journal and all papers should be intelligible to a broad scientific audience.

Research Reports describe the results of original research of exceptional importance. All manuscripts are evaluated by the Editorial Board and more than 50% of Direct Submissions are declined without additional review.

Feature Articles are in-depth research reports with exceptional breadth and may be up to 10 pages in length.

Commentaries call attention to papers of particular note and are written at the invitation of the Editorial Board.

Perspectives present a viewpoint on an important area of research and are written only at the invitation of the Editorial Board. Perspectives focus on a specific field or subfield within a larger discipline and discuss current advances and future directions. Perspectives are of broad interest to nonspecialists and may add personal insight to a field.

Colloquium Papers are reports of scientific colloquia held under Academy auspices.

Letters are brief online-only comments that allow readers to constructively address a difference of opinion with authors of a PNAS article published within the last 3 months. Readers are encouraged to comment on exceptional studies or to point out potential flaws in studies published in the journal. Letters may not include requests to cite the letter writer's work, accusations of misconduct, or personal comments to an author. Letters are limited to 500 words and no more than five references. Letters must be submitted within 3 months of the online publication date of the subject article.

EDITORIAL POLICIES

PNAS Submission Guidelines

Direct Submission. The standard mode of transmitting manuscripts is Direct Submission. The Editorial Board screens all incoming submissions and declines more than 50% without additional review. The current acceptance rate of Direct Submissions is 19%. Authors must recommend three appropriate Editorial Board members, three NAS members who are expert in the paper's scientific area, and five qualified reviewers. The Board may choose someone who is or is not on that list or may reject the paper without further review. Authors are encouraged to indicate why their suggested editors are qualified to handle the paper. A directory of PNAS member editors and their research interests is available at nrc88.nas.edu/pnas_search. The editor may obtain reviews of the paper from at least two qualified reviewers, each from a different institution and not from the authors' institutions. The PNAS Office will invite the reviewers, secure the reviews, and forward them to the editor. The PNAS Office will also secure any revisions and subsequent reviews. The name of the editor, who is

to remain anonymous to the author until the paper is accepted, will be published in PNAS as editor of the article. Direct Submissions are published as "Edited by" the responsible editor and have an identifying footnote.

Prearranged Editors (PE). Prior to submission to PNAS, an author may ask an NAS member to oversee the review process of a Direct Submission. PEs should be used only when an article falls into an area without broad representation in the Academy, or for research that may be considered counter to a prevailing view or too far ahead of its time to receive a fair hearing, and in which the member is expert. If the NAS member agrees, the author should coordinate submission to ensure that the member is available, and should alert the member that he or she will be contacted by the PNAS Office within 3 days of submission to confirm his or her willingness to serve as a PE and to comment on the importance of the work. The submission will not be processed further until the PE has responded with substantive comments, or 3 days have transpired. The Board cannot guarantee that the member designated by the author will be assigned the manuscript or that it will be sent for review. If the Board decides to reject the paper without review or if the Board selects another member to handle the submission, the PE will be notified. Throughout the review process, all correspondence with an editor must be handled by the PNAS Office; authors are not permitted to contact an editor directly. Papers with a PE are published with a footnote to that effect. An NAS member may serve as a PE on as many as four papers per year. Note that the standard submission process does not require a PE.

Feature Articles. Authors submitting Feature Articles are not permitted to use a PE.

PNAS Plus. All authors may submit to a section called PNAS Plus, in which research reports appear exclusively online in an expanded format up to 10 pages in length and may include limited supporting information (SI). PNAS Plus articles cost \$230 per research article page, with no additional charges for color figures and up to four pages of SI. Please see the editorial at www.pnas.org/content/109/34/13469.full.

Contributed Submission. An Academy member may submit up to four of his or her own manuscripts for publication per year. To contribute an article, the member must affirm that he or she had a direct role in the design and execution of all or a significant fraction of the work and the subject matter must be within the member's area of expertise. Contributed articles must report the results of original research. A special obligation applies to a Contributed paper for which the member or coauthors disclose a significant financial or other competing interest in the work. We no longer consider such submissions using the contributed route. Members who disclose a significant conflict of interest must submit their manuscripts using Direct Submission. When submitting using the contributed process, members must secure the comments of at least two qualified reviewers. Reviewers should be asked to evaluate revised manuscripts to ensure that their concerns have been adequately addressed. Members' submissions must be accompanied by the names and contact information, including e-mails, of knowledgeable experts who reviewed the paper, along with all of the reviews received and the authors' response for each round of review, and a brief statement endorsing publication in PNAS. Reviews must be on the PNAS review form. Members must select reviewers who have not collaborated with the authors in the past 48

months. See Section iii for the full conflict of interest policy. Members must verify that reviewers are free of conflicts of interest, or must disclose any conflicts and explain their choice of reviewers. The Academy member must be one of the corresponding authors on the paper. These papers are published as “Contributed by” the responsible editor. Members may contribute PNAS Plus articles.

Significance Statement. Starting July 15, 2013, authors should submit a 120-word-maximum statement about the significance of their paper written at a level understandable to an undergraduate-educated scientist outside their field of specialty. The primary goal of the Significance Statement is to explain the relevance of the work in broad context to a broad readership. The Significance Statement appears in the paper itself. For PNAS Plus papers only, a collection of such statements will appear in the print issue of the journal. For frequently asked questions and examples of Significance Statements, see www.pnas.org/site/authors/pnasplus_faq.xhtml.

All manuscripts are evaluated by the Editorial Board. The Board may reject manuscripts without further review, or review and reject manuscripts that do not meet PNAS standards. Manuscripts rejected by one member cannot be resubmitted through another member or as a Direct Submission. When revisions are requested prior to final decision, revised papers must be received within 2 months or they will be treated as new submissions.

Appeals of decisions on rejected papers will be considered. Due to the high volume of submissions that PNAS receives we cannot guarantee a quick decision. Appeals on the basis of novelty or general interest are unlikely to be granted. Appeals must be made in writing and should be sent to pnas@nas.edu. If an appeal is rejected, further appeals of the decision will not be considered and the paper may not be resubmitted.

Journal Policies

(i) Articles are considered provided they have not been **Published Previously** or concurrently submitted for publication elsewhere. Related manuscripts that are in press or submitted elsewhere must be included with a PNAS submission.

Figures or tables that have been published elsewhere must be identified, and permission of the copyright holder for both the print and the online editions of the journal must be provided (see www.pnas.org/site/misc/permissions_letter.pdf).

(ii) **Authorship** must be limited to those who have contributed substantially to the work. The corresponding author must have obtained permission from all authors for the submission of each version of the paper and for any change in authorship.

All collaborators share some degree of responsibility for any paper they coauthor. Some coauthors have responsibility for the entire paper as an accurate, verifiable report of the research. These include coauthors who are accountable for the integrity of the data reported in the paper, carry out the analysis, write the manuscript, present major findings at conferences, or provide scientific leadership to junior colleagues. Coauthors who make specific, limited contributions to a paper are responsible for their contributions but may have only limited responsibility for other results. While not all coauthors may be familiar with all aspects of the research presented in their paper, all collaborators should have in place an appropriate process for reviewing the accuracy of the reported results. Authors must indicate their specific contributions to the published work. This information will be published as a footnote to the paper. Examples of designations include:

- Designed research
- Performed research
- Contributed new reagents or analytic tools
- Analyzed data
- Wrote the paper

An author may list more than one contribution, and more than one author may have contributed to the same aspect of the work.

(iii) All authors, members, reviewers, and editors must disclose any association that poses a **Conflict of Interest** in connection with the manuscript. Authors must acknowledge all funding sources supporting the work. Recent collaborators, defined as people who have coauthored a paper or were a principal investigator on a grant with the author or member within the past 48 months, must be excluded as editors and reviewers. Other examples of possible conflicts include a close personal friendship, past or present association as thesis advisor or thesis student, or a family relationship. Please see www.pnas.org/site/authors/coi.xhtml for details.

(iv) All work should be free of fabrication, falsification, and plagiarism as defined by the [US Office of Research Integrity](http://www.fda.gov/oc/ohrt/).

(v) Completion of the online submission form electronically gives an exclusive license to publish the work to the National Academy of Sciences. If a paper is declined for publication, the license to publish is terminated.

(vi) The Academy may distribute **Embargoed** copies of an accepted article to the press prior to publication. Embargoes expire at 3 PM Eastern time on the Monday before publication. Authors may talk freely with the press about their work but should coordinate with the PNAS News Office so that reporters are aware of PNAS policy. If you plan on presenting your embargoed paper at a conference prior to publication, please contact the PNAS News Office immediately at 202-334-1310 or PNASnews@nas.edu.

(vii) Research involving **Human and Animal Participants** and **Clinical Trials** must have been approved by the author's institutional review board. Authors must follow the [International Committee of Medical Journal Editors' policy](http://www.fda.gov/oc/ohrt/) and deposit trial information and design into an accepted clinical trial registry before the onset of patient enrollment. Authors must include in the Methods section a brief statement identifying the institutional and/or licensing committee approving the experiments. For experiments involving human participants, authors must also include a statement confirming that informed consent was obtained from all participants. All experiments must have been conducted according to the principles expressed in the [Declaration of Helsinki](http://www.fda.gov/oc/ohrt/).

(viii) **Dual Use Research of Concern.** Authors and reviewers must notify the editor-in-chief if a manuscript reports potential dual use research of concern. The editor-in-chief will evaluate potential dual use research of concern papers and, if necessary, will consult additional reviewers.

(ix) For research using **Recombinant DNA**, physical and biological containment must conform to [National Institutes of Health guidelines](http://www.fda.gov/oc/ohrt/) or those of a corresponding agency.

(x) **Materials and Data Availability.** To allow others to replicate and build on work published in PNAS, authors must make materials, data, and associated protocols available to readers. Authors must disclose upon submission of the manuscript any restrictions on the availability of materials or information. Data not shown and personal communications cannot be used to support claims in the work. Authors are encouraged to use SI to show all necessary data. Authors are encouraged to deposit as much of their data as possible in publicly accessible databases. Such deposition may facilitate access to data during the review process and postpublication. Fossils or other rare specimens must be deposited in a museum or repository and be made available to qualified researchers for examination. For further information about accessibility of data and materials, see the following: *Sharing Publication-Related Data and Materials: Responsibilities of Authorship in the Life Sciences* (2003); and *Ensuring the Integrity, Accessibility, and Stewardship of Research Data in the Digital Age* (2009).

Authors must make **Unique Materials** (e.g., cloned DNAs; antibodies; bacterial, animal, or plant cells; viruses; and algorithms and computer codes) promptly available on request by qualified

researchers for their own use. Failure to comply will preclude future publication in the journal. It is reasonable for authors to charge a modest amount to cover the cost of preparing and shipping the requested material. Contact pnas@nas.edu if you have difficulty obtaining materials.

Plasmids: Authors are encouraged to deposit plasmid constructs in a public repository such as [Addgene](#).

Databases: Before publication, authors must deposit large datasets (including microarray data, protein or nucleic acid sequences, and atomic coordinates for macromolecular structures) in an approved database and provide an accession number for inclusion in the published paper. When no public repository exists, authors must provide the data as SI online or, in special circumstances when this is not possible, on the author's institutional Web site, provided that a copy of the data is provided to PNAS.

Characterization of Chemical Compounds: Authors must provide sufficient information to establish the identity of a new compound and its purity. Sufficient experimental details must be included to allow other researchers to reproduce the synthesis. Characterization data and experimental details must be included either in the text or in the SI.

Protein and Nucleic Acid Sequences: Authors must deposit data in a publicly available database such as [GenBank](#), [EMBL](#), [DNA Data Bank of Japan](#), [UniProtKB/Swiss-Prot](#), or [PRIDE](#).

Structural Studies: For papers describing structures of biological macromolecules and small molecules, the atomic coordinates and the related experimental data (structure factor amplitudes/intensities and/or NMR restraints) must be deposited at a member site of the [Worldwide Protein Data Bank](#): [RCSB PDB](#), [PDBe](#), [PDBj](#), or [BMRB](#). The PDB ID should be included in the manuscript. For nuclear magnetic resonance structures, data deposited should include resonance assignments and all restraints used in structure determination and the derived atomic coordinates for both an individual structure and a family of acceptable structures. Articles must include literature references for all coordinate datasets as well as dataset identification. Authors must agree to release the atomic coordinates and experimental data when the associated article is published. Authors may be asked to provide the atomic coordinates and experimental data during the review process. Questions relating to depositions should be sent to deposit@wwpdb.org.

For papers describing structures of biological macromolecules from electron microscopy experiments, the 3D map should be deposited at either the EMBL-EBI (UK) or RCSB (USA) [EMDB deposition site](#).

Prior to submission, authors are encouraged to use the [International Union of Crystallography \(IUCr\) checkCIF service](#) to validate their crystallographic information files (CIFs) and structure factors. Validation reports may be submitted as SI for editors and reviewers.

Functional Magnetic Resonance Imaging (fMRI) Studies: Authors should deposit data with the [SumsDB](#), [XNAT Central](#), or other suitable public repositories.

Genomic and Proteomic Studies: Authors of papers that include genomic, proteomic, or other high-throughput data are required to submit their data to the NCBI gene expression and hybridization array data repository ([GEO](#)) or equivalent publicly accessible database and must provide the accession number. Access to the information in the database must be available at the time of publication. Submitted data should follow the [MIAME checklist](#).

Enzymology Data: Authors are encouraged to follow the Standards for Reporting Enzymology Data (STRENDa) commission guidelines when reporting kinetic and equilibrium binding data. See the [Beilstein Institut/STRENDa commission Web site](#) for details.

(xi) **Figure Preparation.** No specific feature within an image

may be enhanced, obscured, moved, removed, or introduced. The grouping or consolidation of images from multiple sources must be made explicit by the arrangement of the figure and in the figure legend. Adjustments of brightness, contrast, or color balance are acceptable if they are applied to the whole image and if they do not obscure, eliminate, or misrepresent any information present in the original, including backgrounds. Questions about images raised during image screening will be referred to the editors, who may request the original data from the authors for comparison with the prepared figures. If the original data cannot be produced, the manuscript may be rejected. Cases of deliberate misrepresentation of data will result in rejection of the paper and will be reported to the corresponding author's home institution or funding agency.

(xii) **SI.** SI enhances papers in PNAS by providing additional substantive material, but the print version of the paper must stand on its own merits. SI is reviewed along with the paper and must be approved by the editors and reviewers. Instead of appearing in the printed version of the journal, SI is posted on the PNAS Web site at the time of publication. SI is referred to in the text and cannot be altered by authors after acceptance. Data not shown and personal communications cannot be used to support claims in the work. Authors are encouraged to use SI to show all necessary data.

SI may take the form of supplemental figures, tables, datasets, derivations, and videos. Editors may suggest that part of the submitted data could be more suitably presented online only to save journal space and to focus the article.

(xiii) **PNAS Early Edition (EE).** PNAS articles are published daily online before print. Papers may be published online 1 to 4 weeks before they appear in print. Authors who return proofs quickly and keep changes to a minimum get maximum publication speed. The EE publication date is the official date of record.

(xiv) **Errata.** PNAS publishes corrections for errors, made by the journal or authors, of a scientific nature that do not alter the overall basic results or conclusions of a published article. PNAS articles may be retracted by their authors or by the editor because of pervasive error or unsubstantiated or irreproducible data. Articles may be retracted, for example, because of honest error, scientific misconduct, or plagiarism. Errata are published at the discretion of the editors and appear as formal printed and online notices in the journal.

PROCEDURES FOR SUBMITTING MANUSCRIPTS

Contact Information. PNAS, 500 Fifth Street, NW, NAS 340, Washington, DC 20001 USA. Phone 202-334-2679, fax 202-334-2739, e-mail pnas@nas.edu.

Publication Fees. PNAS depends, in part, on the payment of publication fees to finance its operations. Articles are accepted or rejected for publication and published solely on the basis of merit. All authors will be assessed the following fees:

- **Page charges:** \$75 per page, from all authors who have funds available for that purpose.
- **SI:** \$300 per article for up to five pages of SI and \$600 per article for six or more pages of SI.
- **Color charges:** \$350 for each color figure or table. A single figure is defined as original art that can be processed as a unit and printed on one page without intervening type. Figures published online in color must also be printed in color.
- **Replacement or deletion of figures:** \$150 per color figure or table, \$25 per black and white figure, \$25 per figure in SI (color or black and white).
- **PNAS Plus:** \$230 per page. No additional charges for color figures or SI (up to four pages).
- **Open Access:** Authors of research articles may pay a surcharge of \$1,350 to make their paper freely available through PNAS

open access option. If your institution has a Site License, the open access surcharge is \$1,000. All articles are free online after 6 months.

Authors will also be charged for excessive alterations on proofs and submission of revised files after the article has been transmitted to the printer. Requests for waiver of charges should be submitted to pnas@nas.edu.

Publication charges may be paid by credit card, check, or wire transfer. Upon receipt of the publication estimate, authors must log into the author billing system to provide payment arrangements and designate an individual responsible for payment and follow up. For questions regarding billing and payment of fees, e-mail aubilling.djs@sheridan.com, phone 802-560-8518, or fax 802-882-1639.

Manuscript Preparation

Language-Editing Services. Prior to submission, authors who believe their manuscripts would benefit from professional editing are encouraged to use a language-editing service (see list at www.pnas.org/site/authors/language-editing.xhtml). PNAS does not take responsibility for or endorse these services, and their use has no bearing on acceptance of a manuscript for publication.

Submitting Manuscripts. Authors must submit their articles at www.PNAScentral.org. The submission system requires that the corresponding author include the following information for each coauthor: Author Order, First Name, Last Name, E-mail Address, and Institution. A surcharge of \$50 will be assessed for all hard-copy submissions. A single PDF file is permitted for initial Direct Submissions, but source files are required for all resubmissions, including revisions. Members contributing papers should also submit via the Web and provide source files. Corresponding authors of contributed papers will be provided a URL for file submission after the member has initiated the process by providing his or her endorsement and copies of the reviews received. SI must be submitted online.

Gene Nomenclature. Prior to submission, authors should consult [Genecards](#), or [MGI Nomenclature page](#), or [HUGO Gene Nomenclature Committee](#), or equivalent resources, to ensure standardized nomenclature is used for species-specific gene and protein names. For proposed gene names that are not already approved, please submit the gene symbols to the appropriate nomenclature committee as these must be deposited and approved before publication of the article.

Digital Figures. Only TIFF, EPS, and high-resolution PDF for Mac or PC are allowed for figures that will appear in the print journal. Authors may submit U3D files for 3D images to be published online; these must be accompanied by 2D representations in TIF, EPS, or high-resolution PDF format to be used in the print journal. (See *SI* below for online-only material.) Color images must be in RGB (red, green, blue) mode. Include the font files for any text. Images must be final size, preferably one column width (8.7 cm). Figures wider than one column should be between 10.5 and 18.0 cm wide. Numbers, letters, and symbols should be no smaller than 6 points (2 mm) and no larger than 12 points (6 mm) after reduction and must be consistent. Composite figures must be preassembled. Figures must be submitted as separate files, not embedded in manuscript text. See www.pnas.org/site/misc/digitalart.pdf or contact pnas_specialist.djs@sheridan.com.

Tables. Each table should have a brief title above the table. Table footnotes should be below the table. Tables must be submitted as separate files, not embedded in the manuscript text.

SI. The print version of the paper must stand on its own without the SI. Refer to SI in the manuscript at an appropriate point in the text. Number supporting figures and tables starting with S1, S2, etc. Authors are limited to no more than 10 SI files, not including

movie files.

Authors who place detailed materials and methods in SI must provide sufficient detail in the print edition methods to enable a reader to follow the logic of the procedures and results and also must reference the online methods. If a paper is fundamentally a study of a new method or technique, then the methods must be described completely in the print edition.

Because PNAS edits SI and composes it into a single PDF, authors must provide the following file formats only.

- **Text:** Supply Word, RTF, or LaTeX files (LaTeX files must be accompanied by a PDF with the same file name for visual reference).
- **Figures:** Provide a brief legend for each supporting figure in the supporting text file. Put supporting figure legends after the supporting reference section. Provide figure images in TIFF, EPS, high-resolution PDF, JPEG, or GIF format; figures may not be embedded in manuscript text. When saving TIFF files, use only LZW compression; do not use JPEG compression. Do not save figure numbers, legends, or author names as part of the image. Composite figures must be preassembled.
- **3D figures:** Supply a composable U3D file so that it may be edited and composed. Authors may submit a PDF file but please note it will be published in raw format and will not be edited or composed.
- **Tables:** Supply Word, RTF, or LaTeX files (LaTeX files must be accompanied by a PDF with the same file name for visual reference); include only one table per file. Do not use tabs or spaces to separate columns in Word tables.
- **Datasets:** Supply Excel (.xls), RTF, or PDF files. This file type will be published in raw format and will not be edited or composed.
- **Movies:** Supply Audio Video Interleave (avi), Quicktime (mov), Windows Media (wmv), Animated GIF (gif), or MPEG files and submit a brief legend for each movie in a Word or RTF file. All movies should be submitted at the desired reproduction size and length. Movies should be no more than 10 MB in size.
- **Still images:** Authors must provide a still image from each video file. Supply TIFF, EPS, high-resolution PDF, JPEG, or GIF files.
- **Appendices:** PNAS prefers that authors submit individual source files to ensure readability. If this is not possible, supply a single PDF file that contains all of the SI associated with the paper. This file type will be published in raw format and will not be edited or composed.

Use of URLs in Text. As a publisher, PNAS must be able to archive the data essential to a published article. Where such archiving is not possible, deposition of data in public databases, such as GenBank, ArrayExpress, Protein Data Bank, Unidata, and others outlined in the Information for Authors, is acceptable.

Only links to Web sites that are permanent public repositories, such as self-perpetuating online resources funded by government, academia, and industry, are permitted. Links to an author's personal Web page are not acceptable. PNAS allows authors to post their PNAS paper on their home page after the paper is published in PNAS.

Journal Cover Figures. Authors are invited to submit scientifically interesting and visually arresting cover images. To view examples of cover art, see www.pnas.org/coverarchive. Illustrations need not be reprinted in the article but should be representative of the work. Images should be original, and authors grant PNAS the exclusive license to publish. Include a brief lay-language caption (50–60 words) and credit information (e.g., Photograph courtesy of...). Images should be 21 cm wide by 22.5 cm high. Files should be EPS or TIFF and should be in RGB (red, green, blue) color mode. Cover figure files may be submitted

online when the paper is submitted or may be sent by e-mail to PNAScovers@nas.edu. Send large files on CD-ROM by courier to the PNAS Office or contact PNAS for FTP instructions. Submissions provided outside of the online submission system should include manuscript number, author name, phone, and e-mail. Illustrations will not be returned unless requested.

Manuscript Length. PNAS generally uses a two-column format averaging 67 characters, including spaces, per line. The maximum length of a research article is six printed pages, including all text, spaces, and the number of characters displaced by figures, tables, and equations.

An online submission tool provides authors with an estimation of whether their manuscript fits within the PNAS length requirements. (See [Length Estimate FAQ](#).) Use the following guidelines to determine whether your manuscript exceeds the page-length requirements before submission:

- **Text:** When submitting tables, figures, and/or equations in addition to text, keep the text for your manuscript under 39,000 characters (including spaces).
- **Figures:** Calculated at 180 characters per cm in height for one column and 360 characters per cm in height for two columns; a figure wider than 8.7 cm is two printed columns wide.
- **Tables and equations:** Calculated at 60 characters per line for one column and 120 characters per line for two columns; a table with more than 60 characters per line is two printed columns wide.

If the word processing program character count excludes spaces, add the word count to the character count to obtain a character count that includes spaces.

Authors will be responsible for additional charges incurred due to shortening overlong papers in proof.

Manuscript Format

Manuscript Order. Many authors find it useful to organize their manuscripts with the following order of sections: title page, abstract, Significance Statement (for all research articles), introduction, results, discussion, materials and methods, acknowledgments, references, and figure legends. Provided that authors present information clearly and concisely, other variations to this format are allowed. Number all manuscript pages starting with the title page as page 1. **A single PDF file is permitted for initial submissions, but figures and tables are uploaded separately for revisions and resubmissions.**

Title Page. Please note that information entered in the online submission form will be used for publication purposes (e.g., author contact information and affiliations). Please also include the following information on the title page:

Classification: Select a major (Physical, Social, or Biological Sciences) and a minor category from the following. Dual classifications are permitted between major categories and in exceptional cases, subject to Editorial Board approval, within a major category.

PHYSICAL SCIENCES: Applied Mathematics; Applied Physical Sciences; Astronomy; Chemistry; Computer Sciences; Earth, Atmospheric, and Planetary Sciences; Engineering; Environmental Sciences; Mathematics; Physics; Statistics; and Sustainability Science.

SOCIAL SCIENCES: Anthropology; Economic Sciences; Environmental Sciences; Political Sciences; Psychological and Cognitive Sciences; Social Sciences; and Sustainability Science.

BIOLOGICAL SCIENCES: Agricultural Sciences; Anthropology; Applied Biological Sciences; Biochemistry; Biophysics and Computational Biology; Cell Biology; Developmental Biology; Ecology; Environmental Sciences; Evolution; Genetics; Immunology; Medical Sciences; Microbiology; Neuroscience; Pharmacology; Physiology; Plant Biology; Population Biology; Psychological and Cognitive Sciences; Sustainability Science; and Systems Biology.

Title: Titles should be no more than three typeset lines (generally 135 characters including spaces) and should be comprehensible to a broad scientific audience. Statements of priority and the use of colons are discouraged. Please provide a short title of fewer than 50 characters for mobile devices and RSS feeds.

Author affiliation: Include department, institution, and complete address, with the ZIP/postal code, for each author. Use superscripts to match authors with institutions.

Corresponding author: The name, complete address, telephone number, and e-mail address of the author to whom correspondence and proofs should be sent. Mailing and e-mail addresses will appear in print and online.

Keywords: Keywords are required during the manuscript submission process. Keywords are listed below the abstract of the published article. At least three keywords are required at submission.

Abstract. Provide an abstract of no more than 250 words on page 2 of the manuscript. Abstracts should explain to the general reader the major contributions of the article. References in the abstract must be cited in full within the abstract itself and cited in the text.

Text. Describe procedures in sufficient detail so that the work can be repeated. Methods must be presented after Results and Discussion. Follow the spelling and usage given in *Webster's Third New International Dictionary* or the *Random House Dictionary of the English Language*. Avoid laboratory jargon. Correct chemical names should be given, and strains of organisms should be specified. Trade names should be identified by an initial capital letter with the remainder of the name lowercase. Names of suppliers of uncommon reagents or instruments should be provided. Use Système International units and symbols whenever possible. Statements of novelty and priority are not permitted in the text.

Footnotes. PNAS distinguishes author affiliations and footnotes from in-text footnotes by assigning a different set of footnote symbols to each type. Superscript lowercase letters separated by commas (no spaces) are used for author affiliations. Superscript numerals separated by commas (no spaces) are used for author footnotes. In-text footnotes should be preceded by a footnote symbol, used in the order *, †, ‡, §, ¶, **, ††, ‡‡, §§, ¶¶.

Acknowledgments. List acknowledgments and funding sources. Dedications are rarely allowed.

References. References must be in PNAS style. Only published or in-press papers and books may be cited in the reference list. Unpublished abstracts of papers presented at meetings or references to "data not shown" are not permitted. References should be cited in numerical order as they appear in text. Because tables and figures will be inserted in the text where first cited, references in these sections should be numbered accordingly. **Include the full title for each cited article.** All authors (unless there are more than five) should be named in the citation. If there are more than five, list the first author's name followed by et al. Provide inclusive page ranges for journal articles and book chapters. Cite databases in the text or as footnotes.

Journal articles are cited as follows:

10. Neuhaus J-M, Sticher L, Meins F, Jr, Boller T (1991) A short C-terminal sequence is necessary and sufficient for the targeting of chitinases to the plant vacuole. *Proc Natl Acad Sci USA* 88(22):10362–10366.

Use MEDLINE/PubMed abbreviations of journal titles or use the full journal title for any journals not indexed in MEDLINE.

Articles or chapters in books are cited as follows:

14. Hill AVS (1991) in *Molecular Evolution of the Major Histocompatibility Complex*, eds Klein J, Klein D (Springer, Heidelberg), pp 403–420.

Figure Legends. Provide these separately from figures, after the references in the manuscript. For figures with multiple panels, the first sentence of the legend should be a brief overview of the entire figure. Graphs should include clearly labeled error bars described

in the figure legend. Authors must state whether a number that follows the \pm sign is a standard error (SEM) or a standard deviation (SD). The number of independent data points (N) represented in a graph must be indicated in the legend. Numerical axes on graphs should go to 0, except for log axes. Statistical analyses should be done on all available data and not just on data from a “representative experiment.” Statistics and error bars should only be shown for independent experiments and not for replicates within a single experiment.

Nomenclature and Style. Use international standards on nomenclature. PNAS uses *Scientific Style and Format: The CSE Manual for Authors, Editors, and Publishers* (7th edition, 2006) as the primary style guide.

Updates

The Information for Authors is published in the first print issue of the year. See www.pnas.org/site/authors/index.xhtml for the latest version.
